Release Notes

Version 2020.12 of the Logistics Portal includes system updates to support the Logistics team and their work in the Logistics Portal.

System Updates

Version 2020.12 of the Logistics Portal includes the following:

System Update	Description
VIVY-4843	In the Billing app, a new task was created to update Logistics Data Dump table. This task will update the Logistics Data Dump table based on the customer database with only the kits for that customers.
VIVY-4547	On the Fulfillment Orders > Kit Ship Detail page, when updating contact attempts, the description in the History section referred to "Pickup contact attempt" instead of ship. The description was updated to "Contact attempt" in order to be accurate for both shipping and picking up. This description change will also be visible on the Care Team Portal Ship/Pickup page in the Delivery History.
VIVY-4789	In some situations, when the Care Team Portal calls the Logistics Portal and an error appears, it was retrying the call indefinitely. The system was updated to not retry indefinitely and log the error for investigation.
VIVY-4891	On the Kit List page, the status was not able to be updated for kits without an existing status record in the database. The page was updated to save status changes, even when a previous record doesn't exist.
