

# Release Notes

October 2021

The release notes describe what's new for the Logistics Portal in version 2021.10. The release contains an update to the monthly billing report, an improvement for the process of adding a kit type, and a configuration to redirect +Go device orders from one vendor to another.

- Monthly Billing Report Update ..... 1
- Customers Page –Kit Types Cancel Functionality..... 2
- Configuration to Redirect +Go Devices Orders..... 3
- Logistics Fixes..... 3

## Monthly Billing Report Update

A new **Vendor** column is available in the Monthly Billing report on the Reprocessing tab. The Vendor column identifies which vendor performed the reprocessing.

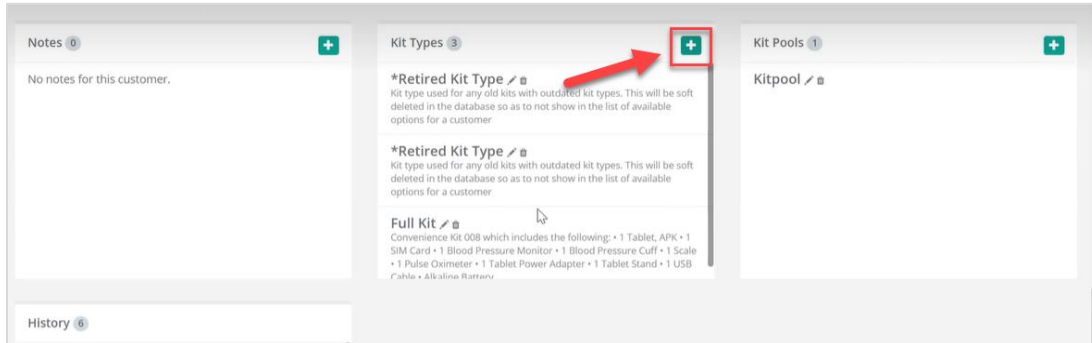

### Example: Monthly Billing Report

Kit Id	Date Received	Date Fulfilled	Ship To	Tracking Number (Inbound)	Billing Code	Facility	Kit Type	Tablet	Kit Pool	Kit Pool Billing Code	Vendor
316166	09/30/2021 16:39	09/30/2021 21:48		65465146	South001	South Hospital	*Retired Kit Type	Verizon Tab E (9.6 in)	South Pool	South001	ODC
316164	09/30/2021 15:42	09/30/2021 20:43		65465416541	South001	South Hospital	*Retired Kit Type	Verizon Tab E (9.6 in)	South Pool	South001	Hypertec
316163	09/30/2021 15:38	09/30/2021 20:38		68456854654	EAST001	East Hospital	*Retired Kit Type	Verizon Tab E (9.6 in)	East Pool	EAST001	Vivify
316139	09/30/2021 14:47	09/30/2021 19:47		6845605415	N001	Vivify North	*Retired Kit Type	Verizon Tab E (8 in 32gb)	Kit Pool North	N001	Vivify

## Customers Page – Kit Types Cancel Functionality

Previously, adding a kit type was a two-step process where the user was required to click **Save** in the first window, which caused the system to save the Kit Type even if the user wanted to cancel the action in the next window. The process was updated so the user can complete the adding action on one page and cancel while in progress, if needed.

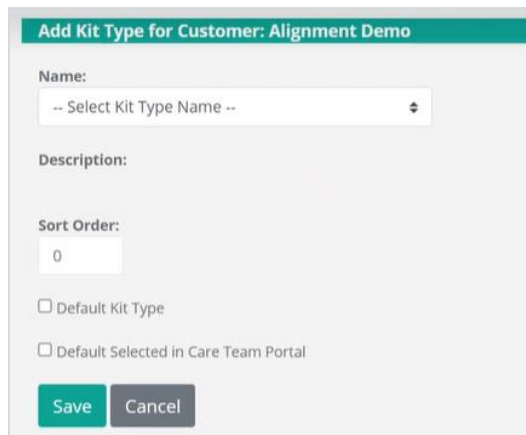

### Example: Button to Add a Kit Type

### Example: Previous Kit Type Window (Two-Step Process)

## Example: New Kit Type Page (One-Step Process)

**Add Kit Type for Customer: Alignment Demo**

Name:  
-- Select Kit Type Name --

Description:

Sort Order:

Default Kit Type

Default Selected in Care Team Portal

Save Cancel

## Configuration to Redirect +Go Devices Orders

---

For +Go orders originating from the Care Team Portal, a configuration setting was added in the Logistics Portal where customer IDs are stored. Once ODC is ready to receive those device orders, we will update the setting with the appropriate customer IDs.

## Logistics Fixes

---

- **VIVY-6643** – To avoid an unnecessary callback to the Care Team Portal from the Logistics Portal, the KitEulaAgreeEvent gets the kit number first and sends it in the original call.
- **VIVY-6862** – Device linking validations were improved on kits and devices. Kit validations now happen before adding devices to the kit. Validations were added to make sure each product has an SKU and serial number.
- **VIVY-6927** – Receive Inventory API – When adding a duplicate serial number for a different device type, the API rejected the call. If a duplicate serial number is for a different device type, the API now accepts the call and creates the device with the serial number.
- **VIVY-6931** – On the Receive Devices page, receiving parts does not increment as expected. The page was updated to increment correctly.
- **VIVY-7103** – In the API/session route used by API users to request a new session, an issue existed where API user A could expire the session for API user B by requesting this route. This issue was resolved.
- **VIVY-7277** – Certain Go orders were going to the incorrect vendor location via API. A location filter was added.

- **VIVY-7282** – Error logging was created for any fulfillment orders originating from the Care Team Portal that were not creating ship orders in the Logistics Portal.
- **VIVY-7302** – The Fulfillment Order detail page failed to load if there is no kit type assigned to the order or the kit in the order. The page was updated to load as expected even when the kit type is not assigned.
- **VIVY-7243, VIVY-7244, VIVY-7245, VIVY-7246, VIVY-7249** – Several updates were made based on the results of portal penetration testing. These updates help to prevent unauthorized access to the portal.
