Release Notes ⌖Logistics

November 2021

The release notes describe what's new for the Logistics Portal. In version 2021.11 of the Logistics Portal, updates were made to resolve issues. No new features are included in this release.

Fixes

- **VIVY-7247** – The Logistics Portal was updated with password lockout functionality. If a user tried to log in with the wrong password, the portal previously allowed the user to continue login attempts indefinitely. With this update, when the limit of 5 consecutive incorrect login attempts is reached, the account will now be locked out for 15 minutes, disabling any more login attempts.
- **VIVY-7501** – The Patient Kit Ship report was modified to remove the Notes and History reference and improve the overall performance.
- **VIVY-7452** – Logging has been added to the KitDetail/AddDevices API method call to capture errors. Errors were appearing occasionally that were not logged.
