

The release notes describe what’s new for the Logistics Portal. In version 2022.06 of the Logistics Portal, the following updates are available:

| | |
|---|---|
| Box Replacement – API Updates | 1 |
| Battery Replacement – API Updates | 1 |
| New Customer Kit Type Attributes: Cuff Size and Scale Type..... | 2 |
| Customer Kit Type Default Attributes Added | 3 |
| Fixes | 4 |

Box Replacement – API Updates

Box replacement request APIs now include inbound carrier information so that contract manufacturers can add return labels to shipments. This information will be added according to the kit pool if the replacement component is one of the following part types:

- Bags
- FedEx Box
- Kit Box

Battery Replacement – API Updates

Replacement component request APIs now include the internal part numbers for batteries so that contract manufacturers know which components to ship. Battery numbers appear in the format: *[part number] [hyphen] [quantity]* (for example: *00169-4* represents four batteries with the part number 00169).

New Customer Kit Type Attributes: Cuff Size and Scale Type

Cuff Size and Scale Type attributes are now available for customer kit types. These attributes are accessible for users with the Vivify Support role on the Customer page in the Kit Types area.

The new checkboxes appear on the Add Kit Type (*Figure 1*) and Edit Kit Type (*Figure 2*) pages. No validation is available for these attributes as the user is expected to select the appropriate options before they submit.

The value ranges for each attribute are as follows:

- Cuff Size:
 - None
 - Small
 - Medium
 - Large
 - Wide Range
- Scale Type:
 - None
 - Normal
 - Bariatric

Customer Kit Type Default Attributes Added

Default cuff size and scale type attributes have been added for all customer kit types so that Vivify Support is not required to manually edit every customer pool (see *Figure 3*). These attributes were set to **None** if default values did not already exist (see *Figure 4*).

Customer: v202203

Name: Tablet + Scale + BP

Description: This Kit type contains the Tablet, Weight Scale and Blood Pressure Monitor

Sort Order: 0

Default Kit Type
 Default Selected in Care Team Portal

Cuff Size Attribute:

- None
- Small
- Medium
- Large

Fixes

- **VIVY-8340** – Pickup records were automatically set to **Ordered** status when fulfillment API acknowledgement was received from Medioh/ODC. Since **Ordered** status is not part of the pickup workflow, pickup records now keep the status they began with instead of changing to **Ordered**. (The status will now be **Not Scheduled** or **Received**.)
- **VIVY-8313** – When a device receipt API did not contain all expected devices, the reprocessing and pickup records were not set to **Retrieval Complete** status. This occurred even if the received devices are the last ones recorded, preventing the Reprocessing Complete API from closing out the fulfillment. In this latest release, this problem has been resolved.
