

## Release Notes

Version 2021.05 of the Logistics Portal includes system updates to support the Logistics team and their work in the portal.

### System Update

System Update	Description
VIVY-5670	The Kit Detail API was updated to be able to retrieve the current and expected MobiPath configured for a specific kit pool, so the Logistics team can automate preparing kits and quality assurance tasks related to moving the tablet to the correct MOBI folder.
VIVY-5847	The Device Receipt API was updated, so it can process the scenario where there is no fulfillment ID passed in the request. This ensures that the new distribution center can reprocess orders when the kit ships were not completed by them.
VIVY-5669	When a kit was in Pending Lost status for a pickup fulfillment order, the kit was transitioning to Lost status after six weeks even if the kit was received and reprocessing was completed during that six-week period. The system was updated to not move a kit to Lost status if the kit is received while in Pending Lost status.
VIVY-5759	On the Fulfillment Orders > Fulfillment Orders Detail page (Kit Pickup) page, the pickup record was not showing the language in Pick Up Address section. The page was updated to show the language as expected.
VIVY-5821	On the Fulfillment Orders > Fulfillment Orders Detail page (Kit Ship) > Ship Kit page, when selecting Cancel on an In Progress order, the user was redirected to an incorrect URL (Reprocessing/Ship). The page was updated to redirect to the expected URL (FulfillmentOrder/Ship).
VIVY-4670	On the Fulfillment Orders > Fulfillment Orders Detail page (Kit Ship) page, the Welcome Call title was updated to Schedule Call.
VIVY-5869	An API was modified to automatically update the logistics center when devices and kits are received, so they are stored with the correct receiving warehouse.
